

## 20 - Use the Azure TCO Calculator (10 min)

In this walkthrough, you will use the Total Cost of Ownership (TCO) Calculator to generate cost comparison report for an on-premises environment.

**Note:** This walkthrough provides example definitions of on-premises infrastructure and workloads for a typical datacenter. To create a TCO Calculator report, use the example definitions or provide details of your *actual* on-premises infrastructure and workloads.

### Task 1: Configure the TCO calculator

In this task, we will add infrastructure information to the calculator.

1. In a browser, navigate to the [Total Cost of Ownership \(TCO\) Calculator](#) page.
2. To add details of your on-premises server infrastructure, click **+ Add server workload** in the **Define your workloads** pane.
